SUMMARY

Software engineering undergraduate (CGPA 8.56) with hands-on production experience building responsive, performant React frontends — including a live platform serving 200+ users with real-time integrity enforcement and sub-2-hour incident recovery. Proficient in JavaScript (ES6+), React hooks, REST API integration, Tailwind CSS, and Figma-to-code workflows, with working knowledge of accessibility principles and performance techniques including lazy loading and code splitting. Proven track record shipping real-world products independently and under deadline, with a top-3 finish at Smart Delhi Ideathon 2025 among 1,000+ teams — ready to contribute to a fast-paced frontend team from day one.

EDUCATION

Guru Gobind Singh Indraprastha University (GGSIPU)
B.Tech. in Information Technology | CGPA: 8.56/10

Aug 2023 – Jun 2027
New Delhi, India

EXPERIENCE

Guruvai Sciences
AI/ML Engineering Intern

May 2026 – present
Remote

- Developed and maintained AI-agent workflows for the Avaloka platform, implementing prompt optimization, bug fixes, and workflow enhancements to improve system performance and reliability.
- Executed end-to-end testing and unit testing strategies for agentic AI pipelines, identifying and resolving defects before production deployment.
- Built and integrated frontend components for new product releases, collaborating with engineering teams to deliver scalable and user-friendly interfaces.
- Worked with cross-functional teams to translate business requirements into AI-powered solutions, contributing across development, testing, and deployment phases.

SortWind Private Limited
Software Development Intern – Windows Application Team

Oct 2025 – Dec 2025
Remote

- Owned end-to-end design and deployment of two globally scalable desktop applications, delivering both ~20% ahead of schedule through disciplined sprint planning and cross-functional coordination.
- Engineered an offline-first architecture using SQLite with bi-directional sync to PostgreSQL; implemented conflict-resolution logic and optimised sync performance by ~30%, improving data consistency across distributed clients.
- Integrated Stripe payment gateway for secure test-purchase flows, handling webhook events, transaction lifecycle management, and order reconciliation — directly analogous to trade capture and settlement workflows.
- Translated stakeholder business requirements into scalable technical specifications, leading cross-functional delivery in a fast-paced environment with independent judgment on system design trade-offs.

Defense Research and Development Organisation (DRDO)
Research Intern – WebGIS Team

Jan 2025 – Feb 2025
New Delhi, India

- Engineered an interactive WebGIS platform in JavaScript and OpenLayers, reducing manual terrain-mapping effort for 15+ DRDO researchers by automating polygon rendering and dynamic layer management across 3 spatial data types.
- Enabled real-time polygon drawing, zoom-level tracking, and dynamic layer rendering on Linux-hosted infrastructure to support terrain-level geospatial analysis.
- Integrated Leaflet and GeoJSON spatial features, improving researcher analytical workflows by 40% through automated data pipelines.

PROJECTS

Dronaa – Scalable Mock Test Platform | [Live](#)

Nov 2025 – Dec 2025

- Built and deployed a production-grade test platform serving 200+ active users using React, Node.js, Express, and MongoDB, with automated CI/CD across Vercel and Render.
- Designed secure OTP-based authentication via SMTP/Nodemailer; diagnosed and resolved live production failures by migrating email services to AWS EC2, restoring 100% uptime within 2 hours.
- Engineered real-time test-integrity features — fullscreen enforcement, tab-switch detection, violation tracking, and automatic submission — reducing cheating incidents to near-zero.
- Optimised frontend performance through lazy loading, code splitting, and NGINX reverse proxy configuration — improving load time under concurrent load and ensuring cross-browser compatibility for 200+ active users across Vercel and AWS EC2.

- Built a cross-platform desktop clipboard manager in Rust and Tauri, reducing state-related bugs by 40% through strict immutability and pure-function patterns for predictable state management.
- Designed and implemented a responsive UI with cross-device sync, clipboard history, and real-time search — applying React hooks-style state patterns in Tauri/Rust to eliminate re-render bugs and cut state-related defects by 40

Samadhan – AI-Powered Legal Mediation Platform | [Live](#)

Apr 2025 – Jun 2025

- Built a React.js frontend with Web Speech API integration for a multilingual, accessible chatbot — applying semantic HTML, responsive design, and WCAG basics to serve 500+ users across low-literacy contexts and cut estimated dispute wait time by 60%.
- Designed a scalable full-stack architecture enabling real-time user interaction, mediator connectivity, and seamless cross-language communication for low-literacy users.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript (ES6+), Rust, SQL, Bash/Shell Scripting**Data Structures & Algorithms:** Arrays, Trees, Graphs, Dynamic Programming, Sorting, Hashing (LeetCode 1597, Codeforces Pupil, 200+ problems solved)**Databases:** PostgreSQL, SQLite, MongoDB, MySQL; familiar with Elasticsearch**Frameworks & Libraries:** React.js, Node.js, Express.js, Tauri v2, React Router, React Native, FastAPI**AI & Machine Learning:** Agentic AI, Prompt Engineering, LLM Applications, AI Agents, Workflow Automation, RAG, AI Evaluation**Testing & Quality Assurance:** Unit Testing, Debugging, End-to-End Testing, API Testing, Performance Optimization**Web Technologies:** REST APIs, Tailwind CSS, Bootstrap, Material UI, Cloudinary, Passport.js, Firebase, Google OAuth**Cloud & DevOps:** AWS EC2, Vercel, Render, NGINX, Linux (Ubuntu), Git, GitHub, Figma**Relevant Concepts:** Offline-first Architecture, Bi-directional Sync, Conflict Resolution, ETL Pipelines, Payment/Transaction Lifecycle, Real-time Data Pipelines, High-Availability Deployment

ACHIEVEMENTS

- **Smart Delhi Ideathon 2025 – Theme Winner:** Ranked 3rd out of 1,000+ teams for an AI-based traffic management solution; felicitated by Delhi LG — demonstrating algorithmic problem-solving and scalable system design under competitive conditions.
- **Competitive Programming:** LeetCode rating 1597; Codeforces Pupil; 200+ problems solved with 5-star HackerRank rating — consistent top-percentile performance in data structures and algorithms.
- **Creative Lead – GDSC ADGIPS:** Spearheaded branding and accessibility design for 5+ tech events, managing cross-functional stakeholder communication and end-to-end creative delivery.
